

I would respectfully request that no limit or secondary consideration be placed on translators for stations that already operate at a disadvantage in wattage, such as WAFG. With only 3000 watts, we cannot compete with other full power stations as it stands now. I also believe that translators should be allotted to stations with low wattage such as ours before they are allotted to stations in our same market that already have 25,000...50,000...or 100,000 watts for their main frequency. Stations in our same market that have up to 50,000 or 100,000 cover our entire market already and we cover only a fraction but are rated in the same manner as though we had the same potential of audience share, which we do not. I believe that every effort should be made to give all stations within a given market the same, fair playing field, which means special consideration toward lower power stations, even if they are listed as full power stations.

Respectfully,  
Dolores King St. George  
General Manager  
WAFG, 90.3FM, Fort Lauderdale
